I can remediate any of the contaminants that were released in the Animas River. Bioremediation is by far the most through and least expensive way to clean up the sludge from the Gold King mine.

Call me and we can work on a solution.

Regards

Marty Millar

EPA is committed to working closely with response agencies and state and local officials to ensure the safety of citizens, respond to concerns and to evaluate impact to water contaminated by the Gold King Mine Release. EPA is sharing information as quickly as possible with the public as experts work to evaluate any effects the spill may have on drinking water, public health, agriculture, fish and wildlife.

Please see our website for the latest information: <http://www2.epa.gov/region8/gold-king-mine-release-emergency-response>

Regular updates will be posted as they are available.

My microbes are listed on the National Contingency Plan. They will remediate all of the heavy metals and contaminants associated with mining waste.

Call me anytime. I will be glad to consult with you to clean up the accidental spill.  
Look forward to hearing from you.
